

CareLink[™] Personal

Software guide

Personalised diabetes insights to empower your therapy decisions

For MiniMed[™] 780G system users

Welcome

This guide is designed to help you get the most out of CareLink[™] Personal, Medtronic's web based diabetes management platform for patient and carer use at home.

It takes all the data from your MiniMed[™] 780G insulin pump and continuous glucose monitor, alongside data from compatible blood glucose (BG) meters and stores it online for your use.

Why use CareLink[™] Personal?

CareLink[™] Personal gives you the ability to:

- Track your personal progress and trends with CareLink[™] reports
- Prepare for and speed up visits with your healthcare team
- Download a record of your current device settings
- Share your data with your healthcare team without going to see them
- Share your data with Care Partners

Make a note of your unique CareLink[™] Personal username and email address associated with your account here:

MiniMed[™] Mobile app

Sync your pump to CareLink™ Personal automatically

You can automatically upload your MiniMed[™] 780G system data through the MiniMed[™] Mobile app. This allows you to stay connected with your Care Partners and saves you time when you or your healthcare team choose to view your data.

Select the Menu button then Sync to CareLink[™] to automatically upload your device data. The CareLink[™] sync feature simplifies your upload process and saves you time.

Sync to CareLink[™]

1. Sync to CareLink[™]

Ensure this is switched on to automatically update your sensor history every five minutes (needed to send Care Partner alerts) and a full upload of your pump every 24 hours to create reports in CareLink[™] Personal.

3. Upload Now

Perform a forced upload of all pump and CGM data in order to generate reports with the most recent information.

2. Manage Care Partners

Approve or remove Care Partners.

Note you can have up to five Care Partners per device user.

4. Change CareLink[™] Sign-in

Change the CareLink $^{\rm TM}$ Personal account you are signed in to.

MiniMed[™] Mobile

CareLink[™] Uploader

Install the uploader on your home computer to perform a manual upload to CareLink™ Personal

From time to time, you may need to do a manual upload of your MiniMed[™] 780G system from a home computer (desktop or laptop), especially if you are not using the MiniMed[™] Mobile app. To do this, you'll need to install the CareLink[™] Uploader by following these steps:

Tip! Make sure you have administration rights on your computer and disconnect any USBs from your computer to install the application

Uploading to CareLink[™] Personal

Getting ready for a manual upload

Ready to upload?

Now you have the CareLink[™] Uploader installed, it's time to prepare to upload.

Have your blue adapter (USB) to hand

Log in to CareLink[™] Personal

Clear any **active** alerts on your pump

Ensure the **low battery** alert is not displayed

Click Upload Now

Clicking **Upload Now** will launch the CareLink[™] Uploader.

You'll be prompted to install the Uploader if you haven't already done so or if there is an update available.

We recommend installing any updates as they become available to ensure the smoothest upload experience.

Completing a manual upload of your MiniMed[™] 780G

Once the CareLink[™] Uploader launches, follow these steps:

1. Choose your device to upload

2. Select your time range

Select the time range you wish to upload. Note, longer time ranges or infrequent uploading will result in a longer upload time.

3. Prepare device for data upload

Follow on-screen instructions to prepare your device

Pair your pump by entering the code displayed on your pump*

When prompted select **Upload Now** on your pump

Wait for upload to complete

4. Upload is complete

Upload Success notice indicates your pump has uploaded!

5. *Subsequent Uploads

Previously uploaded pumps are displayed when launching the uploader. Skip the pairing step by simply selecting your existing device.

Sharing your data

With your diabetes clinic and healthcare professional

Your diabetes clinic may request you link your CareLink[™] Personal account with their CareLink[™] software clinic account. This has two major benefits:

- Saves time in clinic and at your next face-to-face appointment as your diabetes team will already have access to your data to generate reports and review your therapy management
- Enables your clinic to provide remote consultations by having access to data without you needing to be physically present

Face to face (in clinic)

- When prompted by your healthcare professional
- Read the disclaimer notice
- Enter your CareLink[™] Personal username and password to establish the data sharing link

Remotely (via email)

- You will receive a data sharing invitation via the email associated with your CareLink[™] Personal account
- Click on the email link and log in to CareLink[™] Personal
- From the homepage, click on the notification icon and click **View request(s)**
- Read the disclaimer and approve the invitation to establish the data sharing link

Sharing your data

With up to five Care Partners

Accepting a Care Partner link request¹:

Managing your Care Partners

Log in to your CareLink[™] Personal account and navigate to **Data Sharing** > **Care Partners** to manage which Care Partners you share data with, including:

- Approving, suspending or rejecting access
- Enabling Care Partners to receive SMS notifications³

- 1. Personalised glucose alerts are set up by the Care Partner and are subject to a Wifi/Internet connection and CareLink[™] sync being enabled on your MiniMed[™] Mobile app
- 2. Device user and Care Partner must be registered in the same country within CareLink[™] Personal (or countries within the European Economic Area)
- 3. Subject to additional consent by the Care Partner during registration

CareLink[™] Insights

Brought to you by the WeCare app

What is the WeCare app?

The WeCare app provides all-in-one support to you on your diabetes journey. You'll find answers to everyday questions and will be able to access the support you need, when you need it - including our StartRightSM programme. You'll also be able to access CareLink[™] Insights, a convenient and intuitive way to visualise data uploaded to your CareLink[™] Personal account.

CareLink[™] Insights from WeCare app:

- Use same colour coding as the CareLink[™] reports, making it easy to understand hypos, hypers and time in range
- Allows you to view the last 24 hours (daily), or explore glucose patterns with the two-week or 30-day view
- Provides a range of useful information, including average time in range, sensor and BG levels and averages, total daily dose, % of time in SmartGuard[™], number of SmartGuard[™] exits, % sensor use and set change frequency

Selecting and generating reports

Personalised diabetes insights to empower your therapy decisions

Reports

Generating reports to manage your diabetes is made simple and accessible with CareLink[™] Personal. Log in to your account and select **Reports** to get started.

Follow the below steps to generate your CareLink[™] report

1	Time selection - How many days to look back over (7, 14 and 30-day presets)	5	Select i icon to find out more about the report
2	Custom date range - Set a custom date reporting period	6	Click the button to select the report*
3	Date view - Switch between 30 and 90-day view (shows where	7	Click the star icon to add to your favourite reports
	data is available for reports)	8	Select your favourite reports with one click
4	Data Source - Select source data for reports. Unavailable reports will be greyed out	9	Generate chosen reports
	Note: not all reports under the Insulin Pump tab are available for the MiniMed [™] 780G system (see reports overview)		

^{*} Assessment & Progress/Daily reports require further date selection

Personalised diabetes insights to empower your therapy decisions

Understanding where you can make changes in managing your diabetes is an important part of your therapy. CareLink[™] reports are designed to help you with this process by highlighting key insights for MiniMed[™] 780G system users.

Assessment & Progress Report This report is a one-stop shop for any MiniMed [™] 780G system users. You can view your sensor trace with time in range and compare it to how you have in done in the past. You will also be able to see how long you stayed in the SmartGuard [™] feature, the reasons you exited SmartGuard [™] , and how often you changed your insulin set and reservoir.	i
Weekly Review Report This report generates data from your selected date range. It shows your sensor, insulin delivery and events information. Seven days are displayed on each page to easily assess any trends and patterns over the week period.	i
Daily Review Report This report can help you by showing your selected days in much more detail. It can be used to see when you have had SmartGuard [™] exits so that you can identify any patterns and minimise your time in Manual Mode.	i
Meal Summary Report This report is designed to help you understand how your meals and carbohydrate intake can impact your time in range and overall glyceamic control. To effectively make use of this report, it is important that your preferences for mealtimes have been set correctly. You can adjust your meal times and analysis periods in the Preferences section of your account.	i
Log Book Report This report shows information on carbohydrate intake, bolus information and blood glucose levels day by day and hour by hour. It is in a table instead of a graph, if this is how you prefer your information.	i
Adherence Report This report is a quick information table for you to assess your sensor wear, blood glucose monitoring, bolus details and set change information. It can be used to see if you have any behavioral patterns that could be changed.	i
Device Settings Snapshot This report presents the settings of your MiniMed [™] 780G system at the time of a selected upload. It can be used to help interpret other reports or simply to document your device settings.	i

Assessment & Progress Report

Representative patient profile - mmol/L

This section explains how many times you have exited the 6 SmartGuard[™] feature and the reasons for those exits.

These figures show your sensor where and how long you spent in the SmartGuard[™] or manual mode. In addition you'll find key metrics such as your average sensor glucose, glucose management indicator (GMI), Coefficient of variation along side the number of high and low alerts you experienced on average in the reporting period.

10

This is your daily average blood glucose and any calibration data.

This is your insulin use data. How much you are using altogether, how much is basal and how much is bolus. You can also check how much auto correction insulin you are getting and how often you have been changing your infusion set and reservoir.

This section covers your meals. You can review how many

meals and carbohydrates you are eating on average per day.

date ranges (A and B) are displayed here.

SG levels for Data A only.

patterns apply to data A only.

This is your time in range (TIR) data between 3.9-10 mmol/L (70-180 mg/dL). You can compare this information between Data A and B to easily track any changes.

These are your selected data date ranges. Data A (blue) is your

most recent selected date range i.e, the past two weeks. Data B

(orange) is your previous data range to make comparison easy.

This graph represents all of your sensor readings over 24 hours

(midnight to midnight). The darker solid areas represent where

period. The coloured dotted line represents your high and low

variability in this time period. A narrower band would indicate

less variability. The dark dotted line represents your average

These numbers show when you a had period of time where you spent time in hypoglycaemia or hyperglycaemia. These

For easier comparison and to review with your healthcare

provider, your carb ratio settings for the whole day and both

most of your sensor glucose (SG) readings fell during this

5 14

Weekly Review Report

This report shows 7 days of blood glucose (BG), continuous glucose monitoring (CGM), and insulin data from pump and sensor history.

This section of the report is referred to as your insulin profile. You can see Auto Basal as the pink section. Boluses are coloured in purple with light shading to resemble Active Insulin. The bolus amounts in purple are the total units for that event and the number in the parenthesis (if applicable, and not shown here) gives the number of times a bolus was given that equates to that bolus total. The orange boxes are the total about of carbohydrates entered with the number of times carbs were entered for that moment.

Representative patient profile - mmol/L

Take a look at the insulin profile under the CGM trace graph. You'll see SmartGuard[™] in action with Auto Basal delivering as expected and Auto Correction, shown in the small purple squares that look like tiny boluses, being delivered to manage glucose levels.

3

A dotted green line, as illustrated here indicated the use of a Temp Target. You can follow the CGM line to see how insulin, meals and any exercise affect glucose.

The grey shading in the insulin profile shows a Manual Suspend.

Daily Review Report

Representative patient profile - mmol/L

Each page of the Daily Review report displays 2 days of pump and sensor history.

- Here is your daily breakdown of insulin delivered from the pump, also known as Total Daily Dose (TDD), split between basal and bolus.
- This area represents your insulin delivery. The pink shading represents your auto basal delivery. If you deliver a manual bolus, insulin is in a purple box and carbohydrate in a orange box.

Each day in the Daily Review report will offer a Time in Range (TIR) graph, reflecting glucose ranges for that specific day.

4

Notice the bell icon above the CGM graph. This indicates a sensor alert was triggered and received by the pump.

6 You can follow the CGM graph line to see cause and effect of boluses given. In this example, a series of auto corrections were delivered while auto basal was at maximum for a trending high glucose, helping to keep with the target range.

1

Meal Summary Report

	12023 (14 Days)				
All Meal Boluses					
Breakfast - All Boluses	Stats			Breakfast - Analyzed Meals	Observations
me 8 8.1	Time	6:00 AM - 10:00 AM		-	
	Bolus Count	10			
80 10	Carb Ratio (g/U)	2 65		3	
8	Avg. Carbs (g)	23 + 5			
1:00 Bokus 1:00 3:00 hr hr hr hr	Avg. Bolus (U)	3.4 ± 0.8]	
Lunch - All Boluses	Stats			Lunch - Analyzed Meals	Observations
Avg. 90 80 At Boks: 90 At 297. (mmsl) 11.8 9.2	Time	11:00 AM - 3:00 PM			
Class Contraction of	Bolus Count	8			
N 10	Carb Ratio (g/U)	6.5, 7.0	· · · · · ·		
	Avg. Carbs (g)	32 # 14			
110 Beks 100 300	Avg. Bolus (U)	4.6 ± 1.9			
Dinner - All Boluses	Stats			Dinner - Analyzed Meals	Observations
Avg. 80 80 At 2015 80 At 2017 (mmd/L) 11.3 8.9	Time	4:00 PM - 10:00 PM			
7	Bolus Count	16			
	Carb Ratio (g/U)	7.0, 6.5			
	Avg. Carbs (p)	24 ± 12			
1.30 Beks 100 3.00	Avg. Bolus (U)	3.6 • 1.8			
Overnight - All Boluses	Stats			Overnight - Analyzed Meals	Observations

20	Bolus Count	2			
1	Carb Ratio (g/U)	6.5, 7.0, 6.5			
	Avg. Carbs (g)	27 ± 20			
22	Avg. Bolus (U)	4.2 + 3.0			

3

Representative patient profile - mmol/L

All meals for the selected time frame will be displayed in each meal section. For example, if breakfast is set for 06:00 to 08:00, all boluses between these two times will have data displayed in the breakfast section.

TIP: Make sure your times are set wide enough to accommodate different mealtimes at weekends.

Stats show your carbohydrate ratio for easy review and how many boluses you are taking. You can also see what your current mealtime preferences are. This section of the report is left blank so if you print your report, you have somewhere to take notes.

Log Book Report

3

4

Representative patient profile - mmol/L

Each bolus event corresponds to the time and date taken and contains blood glucose information (red if low, no colour if in range and orange if above range), carbohydrate entered (in black), and insulin delivered.

These meal labels are used to indicate the times when a certain meal is eaten. Use these meal **buckets** to organise the approximate time you eat each meal and note any consistency. These times can be adjusted in the preferences section of your CareLink[™] Personal account.

Did you forget to enter a meal or perhaps you were fasting on a particular day? These squiggles indicate a skipped meal.

Each row is a different day of this reporting period. Refer to your Daily Totals to see averages compared to other days. This includes average BG (based on number of BG's taken throughout the day), total carbs consumed and total insulin delivered (units), with the % delivered as a bolus.

Shows an example of a bolus with no carbohydrates. This could be a correction or a manual bolus.

Adherence Report

Representative patient profile - mmol/L

Here you'll find the number of blood glucose readings (if any) you've taken each day.

- This column shows what duration per day you have worn a sensor, with a total time at the bottom. If you have not worn a sensor, this field will be blank.
 - These columns show how many manual and how many Bolus Wizard events you have given. Your auto correction boluses are included in the manual bolus numbers.

This column shows how long per day your pump was suspended the coloured symbols denote what kind of suspend it was. There is a key at the bottom of the report to explain the symbols.

These columns show details on when the pump registered reservoir rewinds and cannula fills.

Device Settings (MiniMed[™] 780G pump)

Provides information on Manual Mode basal rate patterns including maximum basal rate (units / hour), total units over 24 hour period and units / hour for set times during the day.

- Find information on your pumps current bolus and Bolus Wizard™ settings.
- Manual Mode only: Shows any Normal or Square Wave pre-set bolus you have programmed. Includes units and duration (if square wave).
- Manual Mode only: Shows any pre-set Temp basal settings (up to 8) for a variety of different scenarios. Each pre-set includes filtration rate and duration.
 - Confirms the SmartGuard[™] feature is turned on for your pump and provides information on your glucose target and whether auto corrections are on or off.

Displays high and low sensor glucose alert settings.

7

8

Provides information on four additional Manual Mode basal rate patterns including maximum basal rate (units / hour), total units over 24 hour period and units / hour for set times during the day.

Displays information on current reminders set up in your insulin pump. These include low reservoir warning (including number of units) and set change reminders. In addition up to eight Missed Meal bolus reminders can be set and an additional eight personalised reminders for a variety of scenarios.

Shows current **general** pump settings.

1. What computer software does CareLink[™] Personal support?

CareLink[™] Personal and the CareLink[™] Uploader support a range of browsers and operating systems (both for Windows[®] and Mac[®]). Click here to see the latest supported software required to use CareLink[™] Personal.

2. How does Medtronic use my data?

We'll only ever use your data for the purposes you provide consent to on sign up to CareLink[™] Personal. We require some consent to enable you to access the software, however there are some which are optional and you can update if you choose through your account (log in to your account, select your name (top right), and then select **consent agreement** to update your consents).

3. What happens to my data once it is shared with my diabetes clinic?

If you link your CareLink[™] Personal account with your diabetes clinic, any data you share will be available to them. It's important to know that even if you unlink, data shared up until that point will still be available to your diabetes clinic, even if you decide to delete your CareLink[™] Personal account. Speak directly to your diabetes healthcare provider for information on your hospital's privacy policy and how they may use your data.

4. How do I manage Care Partners and clinics I am sharing data with?

With CareLink[™] Personal, you're in control of who you share data with. Log in to your account and select **Data Sharing** to manage your Care Partner(s) and clinic(s) who you are sharing your data with.

5. When I launch the CareLink[™] Uploader I'm notified there is an update available/that I must update. What do I do?

From time to time, we release an updated version of the CareLink[™] Uploader. If you are using a version that is still supported you may continue to upload straight away. We recommend installing the updated CareLink[™] Uploader at the earliest convenience to ensure a continued smooth upload experience. If you are using a version which is no longer supported, you'll need to update before attempting a manual upload.

6. I've forgotten my CareLink[™] Personal password. What do I do?

Select **Forgot password?** from the CareLink[™] Personal homepage. Enter your username and the email address associated with your account and complete the ReCAPTCHA to submit a password reset request. An email containing a link to reset your password will then be sent to your email address.

7. I've forgotten my CareLink[™] Personal username. What do I do?

Contact your local Medtronic Technical Support Helpline for further assistance.

CareLink[™] Personal website: <u>carelink.minimed.eu</u>
